on social media.

Invitation

THE ROLE OF PARTNERSHIPS IN SUPPORTING INNOVATION TO COMBAT ANTIMICROBIAL RESISTANCE (AMR)

Panel debate followed by an overview of the discussions at the United Nations High-Level Meeting on AMR from Dr. Keiji Fukuda (World Health Organization)

September 21, 2016

6:00 pm – 8:15 pm, Reception to follow

Convene, 730 Third Avenue,
between 45th & 46th St, New York

The growth of antimicrobial resistance (AMR) combined with the decline in the development of antibacterial medicines pose a grave threat to global public health. We now face the possibility of a future without effective antibiotics for several types of bacteria that cause life-threatening infections in humans. The pharmaceutical industry is committed to playing its full role in combating AMR and supporting the implementation of the WHO Global Action Plan and delivering on the Industry Declaration signed in Davos. We believe in a multi-stakeholder approach to find sustainable solutions to curb resistance.

IFPMA is organizing a high-level panel discussion on the fringe of the UN General Assembly to convene key experts to discuss how partnerships can support innovation and ensure sustainable antibiotic treatments are available to meet the health challenges of the future.

Participants will include UN Member States and Agencies representatives, corporate executives and civil society representatives.

Speakers

Dr. Joseph Larsen, Acting Deputy Director, U.S. Department of Health and Human Services (HHS), Biomedical Advanced Research and Development Authority (BARDA)

Dr. Manica Balasegaram, Director, Global Antibiotic Research and Development (GARD) Partnership
